the .earlier in life
one is exposed to
noxious factors, the
more severe is the

early child-parents'
and child-siblings'
interactions are

highly relevant family determinants of mental health and mental disorder.

Moreover, parents themselves do not live in a vacuum.

Their marital interaction

significantly contributes to their own mental health or to its decline, and parent-child

relationships are greatly influenced by the nature of intraparental relationships.

Parental discord, conflicts, and abandonment affect the child's

personality development. Thus, family and marital therapy is more than therapy; it is

Readers will be delighted to find that this one resource contains extensive "how to do" guidelines for setting up and planning multiple family groups. A group practice model is outlined in

the text which provides a clear delineation of goals for each treatment phase of these groups. The latter guide provides a practical framework for planning sessions, guiding the facilitation approach utilized, and designing a program evaluation.

Download

Ebook A

The heart of this book contains 80 different techniques for building trust among group members, providing psych-education, assisting in problem solving, and allowing for a healthy closure of the group experience. Over half of these

techniques include a task sheet which can be duplicated for use with treatment groups.

Over 50 bibliotherapy references are also provided along with material related to building resilient families and youth. In addition, readers are given a sample

of a multiple family group contract, documentation notes, and a session by session planning sheet. Professionals will be amazed at how much time this text will save them.

The book will quickly become a daily resource manual which will assist in more
