Our Sabre Septic system converts your standard septic tank into an advanced wastewater treatment plant and restores your failed drainfield without digging or replacement. This state-of-the-art design relies on standard wastewater engineering practices to clean and aerate the septic tank and send clean water to

Get Free Advanced

the drainfield. By sending aerated, clean water to the field at timed intervals, we can restore most drainfields that have failed due to solids plugging (biomat formation).

Sewage treatment is the process of removing contaminants from wastewater and household sewage water. It includes physical, biological and sometimes chemical processes to remove

pollutants. Its aim is to produce an environmentally safe sewage water, called effluent, and a solid waste, called sludge or biosolids, suitable for disposal or reuse.
