Written for the piping engineer and designer in the field, this two-part series helps to fill a void in piping literature, since the Rip Weaver books of the '90s were taken out of print at the advent of the Computer Aid Design (CAD) era. Technology may have changed, however the fundamentals of piping rules still apply in the digital representation of process piping systems. The Fundamentals of Piping Design is an introduction to the design of piping systems, various processes and the layout of pipe work connecting the major items of equipment for the new hire, the engineering student and the veteran engineer needing a reference.

Industries that use pumps, seals and pipes will also use valves and actuators in their systems. This key reference provides anyone who designs, uses, specifies or maintains valves and valve systems with all of the critical design, specification, performance and operational information they need for the job in hand. Brian Nesbitt is a well-known consultant with a considerable publishing record. A lifetime of experience backs up the huge amount of practical detail in this volume. * Valves and actuators are widely used across industry and this dedicated reference provides all the information plant designers, specifiers or those involved with maintenance require * Practical approach backed up with technical detail and engineering know-how makes this the ideal single volume reference * Compares and contracts valve and actuator types to ensure the right equipment is chosen for the right application and properly maintained

/Nayyar/Mohinder L. A total revision of the classic reference on piping design practice, material application, and industry standards. Table of Contents: Definitions, Abbreviations and Units; Piping Components; Piping Materials; Piping Codes and Standards; Manufacturing of Metallic Piping; Fabrication and Installation of Piping; Hierarchy of Design Documents; Design Bases; Piping Layout; Stress Analysis of Piping; Piping Supports; Heat Tracing and Piping; Thermal Insulation of Piping; Flow of Fluids; Piping Systems; Non-Metallic Piping; Thermoplastics Piping; Fiberglass Piping Systems; Conversion Tables; Pipe Properties; Tube Properties; Friction Loss for Water in Feet Per 100 Feet of Pipe. 800 illustrations.
