Bacteriology is the main resource for determining the identity of prokaryotic

organisms, emphasizing bacterial

species, using every characterizing

aspect. The manual was published

subsequent to the Bergey's Manual of

Determinative Bacteriology, though the

latter is still published as a guide for

identifying unknown bacteria. First

published in 1923 by David Hendricks

Bergey's Manual of Systematics of Archaea and Bacteria (BMSAB) is a reference work aimed at undergraduates, graduate students, researchers, professors and experienced professionals at all levels. About a hundred new genera and 600+ new species have been described per year for each of the last 5 years. To remain abreast of this explosion in knowledge of the microbial world, an electronic manual with frequent updates is necessary.

Systematic information will continue to be found in Bergey's Manual of Systematic Bacteriology, with the Determinative manual serving as a reference to aid in the identification of unknown bacteria. The arrangement of the book is strictly phenotypic, with no attempt to offer a natural higher classification.
