Embedded programming only starts from chapter 8, so by the time you get to chapter 8 you will already know a substantial amount of C. After starting to learn the C language on a PC with a two line program, the first embedded program in chapter 8 is only a few lines of code. Each line of code is very well explained.

C is used for desktop computers, while embedded C is for microcontroller based applications. C takes more resources of a desktop PC like memory, OS, etc. while programming on desktop systems what embedded C cannot. Embedded C has to use the limited resources (RAM, ROM, I/Os) on an embedded processor.
