Gas exchange between tissues and the blood is an essential function of the circulatory system. In humans, other mammals, and birds, blood absorbs oxygen and releases carbon dioxide in the lungs. Thus the circulatory and respiratory system, whose function is to obtain oxygen and discharge carbon dioxide, work in tandem.

Cardiovascular, respiratory, and related conditions cause more than 40 percent of all deaths globally, and their substantial burden is rising, particularly in low- and middle-income countries (LMICs). Their burden extends well beyond health effects to include significant economic and societal consequences. Most of these conditions are related, share risk factors, and have common control measures at the clinical, population, and policy levels. Lives can be extended and improved when these diseases are prevented, detected, and managed. This volume summarizes current knowledge and presents evidence-based interventions that are effective, cost-effective, and scalable in LMICs.

This presentation describes various aspects of the regulation of tissue oxygenation, including the roles of the circulatory system, respiratory system, and blood, the carrier of oxygen within these components of the cardiorespiratory system. The respiratory system takes oxygen from the atmosphere and transports it by diffusion from the air in the alveoli to the blood flowing through the pulmonary capillaries. The cardiovascular system then moves the oxygenated blood from the heart to the microcirculation of the various organs by convection, where oxygen is released from hemoglobin in the red blood cells and moves to the parenchymal cells of each tissue by diffusion. Oxygen that has diffused into cells is then utilized in the mitochondria to produce adenosine triphosphate (ATP), the energy currency of all cells. The mitochondria are able to produce ATP until the oxygen tension or PO_2 on the cell surface falls to a critical level of about 40 mm Hg. Thus, in order to meet the energetic needs of cells, it is important to maintain a continuous supply of oxygen to the mitochondria at or above the critical PO_2 . In order to accomplish this desired outcome, the cardiorespiratory system, including the blood, must be capable of regulation to ensure survival of all tissues under a wide range of circumstances. The purpose of this presentation is to provide basic information about the operation and regulation of the cardiovascular and respiratory systems, as well as the properties of the blood and parenchymal cells, so that a fundamental understanding of the regulation of tissue oxygenation is achieved.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the

interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Histology Multiple Choice Questions and Answers (MCQs): Histology quizzes & practice tests with answer key provides mock tests for competitive exams to solve 815 MCQs. "Histology MCQs" helps with theoretical, conceptual, and analytical study for self-assessment, career tests. This book can help to learn and practice "Histology" quizzes as a quick study guide for placement test preparation. Histology Multiple Choice Questions and Answers (MCQs) is a revision guide with a collection of trivia quiz questions and answers on topics: Blood, bones, cartilages, cell, cerebrum, cerebellum and spinal cord, circulatory system, connective tissues, connective tissues proper, digestive system, ear, endocrine system, epithelium, eye, eye: ciliary body, eye: fibrous coat, eye: iris, eye: lens and conjunctiva, eye: lens, accessory structure of eye, eye: retina, eye: vascular coat, female reproductive system, glands, immune system and lymphoid organs, integumentary system, male reproductive system, muscular tissue, nervous tissue, respiratory system, urinary system to enhance teaching and learning. Histology Quiz Questions and Answers also covers the syllabus of many competitive papers for admission exams of different universities from life sciences textbooks on chapters: Blood Multiple Choice Questions: 49 MCQs Bones Multiple Choice Questions: 47 MCQs Cartilages Multiple Choice Questions: 10 MCQs Cell Multiple Choice Questions: 91 MCQs Cerebrum, Cerebellum and Spinal Cord Multiple Choice Questions: 24 MCQs Circulatory System Multiple Choice Questions: 30 MCQs Connective Tissues Multiple Choice Questions: 21 MCQs Connective Tissues Proper Multiple Choice Questions: 22 MCQs Digestive System Multiple Choice Questions: 90 MCQs Ear Multiple Choice Questions: 20 MCQs Endocrine System Multiple Choice Questions: 68 MCQs Epithelium Multiple Choice Questions: 10 MCQs Eye Multiple Choice Questions: 5 MCQs Eye: Ciliary Body Multiple Choice Questions: 5 MCQs Eye: Fibrous Coat Multiple Choice Questions: 22 MCQs Eye: Iris Multiple Choice Questions: 5 MCQs Eye: Lens and Conjunctiva Multiple Choice Questions: 5 MCQs Eye: Lens, Accessory Structure of Eye Multiple Choice Questions: 7 MCQs Eye: Retina Multiple Choice Questions: 14 MCQs Eye: Vascular Coat Multiple Choice Questions: 9 MCQs Female Reproductive System Multiple Choice Questions: 21 MCQs Glands Multiple Choice Questions: 24 MCQs Immune System and Lymphoid Organs Multiple Choice Questions: 20 MCQs Integumentary System Multiple Choice Questions: 58 MCQs Male Reproductive System Multiple Choice Questions: 37 MCQs Muscular Tissue Multiple Choice Questions: 18 MCQs Nervous Tissue Multiple Choice Questions: 39 MCQs Respiratory System Multiple Choice Questions: 19 MCQs Urinary System Multiple Choice Questions: 25 MCQs The chapter "Blood MCQs" covers topics of erythrocytes, leukocytes, plasma, and platelets. The Social Security Administration (SSA) uses a screening tool called the Listing of Impairments to identify claimants who are so severely impaired that they cannot work at all and thus immediately qualify for benefits. In this report, the IOM makes several recommendations for improving SSA's capacity to determine disability benefits more quickly and efficiently using the Listings.
