Some operations leads to $0 = \frac{\partial}{\partial a} \left(\frac{2\pi a^2 C}{a} \right) = 2\pi C \left(\frac{2a}{a^2} - \frac{1}{a^2} \right) = \frac{2\pi C}{a^2} (2a - 1)$, therefore we have $2a - 1 = 0$, $a = \frac{1}{2}$ Substitute it back to (3.4.4), we have $C = \frac{1}{2}$ (3.4.5) That means the optimum cross-section for elliptical shapes is a circle.

Sun . . . Solutions

Fracture mechanics is a subject of engineering science that deals with failure of solids caused by crack initiation and propagation. There are two basic approaches to establish fracture criteria, or crack propagation criteria: crack tip stress field (local) and energy balance (global) approaches.

Fracture Mechanics Solutions Manual

Fracture mechanics is the methodology used to predict or diagnose the failure of a part with an existing crack or flaw. Although Charpy and Izod impact tests give toughness values for a material they do not give a true material property because the result depends on the sample geometry.
