Humanizing psychiatry : the
biocognitive model (Book, 2010 ...
The author's case is that this has
failed to give rise to a human-centered
psychiatry. His own model of mental
disorder, the biocognitive model, is
based on a molecular resolution of the
mind-body problem (ie, the ancient
question of how the immaterial mind
and the material body interact). It is
manifestly dualist (ie, it accords
causative primacy to mind).

Modern psychiatry has no formal model of mental disorder to guide its daily practice, teaching and research. McLaren offers a rational model of mental disorder within the framework of a molecular resolution of the mind-body problem. This model will have revolutionary consequences for psychiatry--and the mentally afflicted.

The long-awaited final installment of the Biocognitive Model Series "Humanizing Psychiatrists" is the third of a series directed at developing the Biocognitive Model of Psychiatry as the replacement for the three nineteenth century models of mental disorder, psychoanalysis, behaviorism and biological psychiatry. explore the logical status of theories used in psychiatry. He shows that Dennett's functionalism and Searle's biological naturalism cannot be used as the basis for a theory for biological psychiatry. He argues that phenomenology is a valuable technique but can never form a genuine theory. in addition, he shows how orthodox psychiatry uses its publishing industry to suppress criticism of itself, which is a gross breach of scientific ethics. He then shows how his Biocognitive Model of Mind can be applied to clinical practice with dramatic results. Praise for Niall McLaren's Biocognitive Model of Mind "This book is a tour de force. demonstrates conclusively that it is so flawed as to be beyond salvation.

McLaren shows how the phenomena of mental disorder can be described in a parsimonious dualist model which leads directly to a humanist form of management.

Dr. Niall (Jock) McLaren is an Australian psychiatrist who uses philosophical analysis to show that modern psychiatry has no scientific basis. This startling conclusion dovetails neatly with the growing evidence that psychiatric drug treatment is crude and damaging. Needless to say, this message is not popular with mainstream psychiatrists. However, in this book, he shows how the principles of information processing give a formal theory of mind that generates a model of mental

disorder as a psychological
phenomenon.

During their careers, many students become aware that, lurking in the background, there are complex and conceptually difficult questions that, all too often, their teachers either can't answer, or can't even understand. These are traditionally the questions addressed by philosophy, and this little primer is the result of another student's journey over many years. Niall McLaren MD has spent over three decades banging his head against the Really Difficult questions behind psychiatry, and offers his a personal view of how these questions should be approached. Very deliberately, he simplifies the convoluted language and reasoning that set philosophers apart, making it

accessible to students of scientific fields in particular. In this book, you will gain a background in the following fields: * Religion and the origins of philosophy * Mentalism, antimentalism and behaviorism * Epistemology, as the study of knowledge itself * Philosophy and the nature of science * Philosophy and the nature of ethics Included is a glossary explaining some of the many "-isms" that can be so daunting to non-philosophers because philosophers too have their jargon but it is not meant to intimidate. True, it can be complex, but the issues involved are complex. The goal of this book is to show that, with clear thinking, the complexities need not be overwhelming. Discussion. It is such a bounty of iconoclastic observations emanating from an in-depth acquaintance with psychiatry and a love of philosophy that no single reading can do it justice: it just keeps giving." ---Sam Vaknin, PhD, author of "Malignant Self-love: Narcissism Revisited" From Future Psychiatry Press

In Anxiety--The Inside Story, the author takes a critical look at modern psychiatry's twin notions that all mental disorders are biological in nature, but anxiety is hardly worth worrying about. By the simple process of taking a careful, detailed history, Niall McLaren shows that anxiety is far more common and far more destructive than mainstream psychiatry realizes. Detailed case

histories chart how anxiety arises as a psychological disorder and how it reinforces itself to the point where it destroys lives. McLaren concludes that anxiety is a major factor in most mental disorders, especially depression and bipolar disorder. This book will change your understanding of mental disorders. Niall (Jock) McLaren writes as he speaks and he pulls no punches. I love this. People should listen to what he has to say about the academic corruption of his specialty, psychiatry. Read this book. The man is unique. And funny, as well.

-- Prof. Peter Gotzsche, Director,
Nordic Cochrane Centre, Copenhagen

Debilitating anxieties are frequently misdiagnosed as "depression" by GPs and specialists alike. In this wonderfully accessible account of anxiety, Dr. McLaren demonstrates

with great clarity--and very movingly--how a case history approach can help patients confront and overcome their psychological demons. He provides compelling evidence that instead of drugging people, listening to them attentively and analytically has to be the beginning of the healing process. -- Dr. Allan Patience, University of Melbourne

Anxiety--The Inside Story offers readers a devastating, blistering critique of psychiatry, together with a provocative exploration of how anxiety, so often dismissed as a "minor" difficulty, should be understood as the root cause of so much suffering--which manifests in a diverse range of behaviors that get wrongly categorized as distinct psychiatric "illnesses." Niall McLaren presents a compelling case that psychiatric care in Australia and

Those in the counseling profession are interacting more with people from other cultures, the U.S. sphere of influence throughout the world is spreading, increasingly, we are providing services to clients who are not Caucasian or of European

heritage, and our educational programs have been active in training both domestic students of diverse ethnic backgrounds as well as foreign students. These factors combine to contribute to the need for those who provide counseling to understand the elements involved in interacting with a wide spectrum of people. This book meets that need by providing a brief synopsis on such topics as common factors, values, universals, cross-cultural competence, and models, approaches, and psychological perspectives of human behavior (theories of personality). The emphasis is on material that relies more on the use of the scientific method and data instead of anecdotal and experiential literature. For the reader who is interested in obtaining information from which statements are

derived, there are references to investigate the material further. Unlike other book that stress the barriers between counselor and client, this book adds the perspective that there are factors that facilitate interactions between the two. There are also frequent cross-cultural examples in the book. To facilitate awareness of similarities and differences in views of human behavior, samples of African, Arab, Chinese, and European/American perspectives are represented. There is also a relatively large section on applications. This consists of such subjects as cross-cultural aspects of psychological theories, ethics, research, tests, Euro-American approaches and experiences, client characteristics, client and counselor interactions, and therapeutic techniques. Many other
