The European Union is in crisis. Crippled by economic problems, political brinkmanship, and institutional rigidity, the EU faces an increasingly uncertain future. In this compelling essay, leading scholar of European politics, Jan Zielonka argues that although the EU will only survive in modest form - deprived of many real powers - Europe as an integrated entity will grow stronger. Integration, he contends, will continue apace because of European states’ profound economic interdependence, historic ties and the need for political pragmatism. A revitalized Europe led by major cities, regions and powerful NGOs will emerge in which a new type of continental solidarity can flourish. The EU may well be doomed, but Europe certainly is not.

This timely book offers a multifaceted analysis of EU-Russian relations, drawing on the investigation of competing models of international society. Makarychev argues that the huge variety of interest-based and normative models is best explained through the study of foreign policy and identity discourses. His approach defies simplistic explanations of EU-Russian relations as either destined for cooperation or doomed to constant collisions. Instead, Makarychev unveils multiple alternatives that both the EU and Russia face in their policies toward each other. Assessing the repercussions ongoing EU-Russian discord has on Europe and the world, Makarychev’s volume reveals the interconnectedness of the discourses dominating the EU and Russia while also accounting for the deep-seated disconnect between them.

Why is Europe’s great monetary endeavor, the Euro, in trouble? A string of economic difficulties in Eurozone nations has left observers wondering whether the currency union can survive. In this book, Markus Brunnermeier, Harold James, and Jean-Pierre Landau argue that the core problem with the Euro lies in the philosophical differences between the founding countries of the Eurozone, particularly Germany and France. But the authors also show how these seemingly incompatible differences can be reconciled to ensure Europe’s survival. Weaving together economic analysis and historical reflection, The Euro and the Battle of Ideas provides a forensic investigation and a road map for Europe’s future.

The euro crisis is tearing Europe apart. But the heart of the matter is that, as the crisis unfolds, the basic rules of European democracy are being subverted or turned into their opposite, bypassing parliaments, governments and EU institutions. Multilateralism is turning into unilateralism, equality into hegemony, sovereignty into the dependency and recognition into disrespect for the dignity of other nations. Even France, which long dominated European integration, must submit to Berlin’s strictures now that it must fear for its international credit rating. How did this happen? The anticipation of the European catastrophe has already fundamentally changed the European landscape of power. It is giving birth to a political monster: a German Europe. Germany did not seek this leadership position - rather, it is a perfect illustration of the law of unintended consequences. The invention and implementation of the euro was the price demanded by France in order to pin Germany down to a European Monetary Union in the context of German unification. It was a quid pro quo for binding a united Germany into a more integrated Europe in which France would continue to play the leading role. But the precise opposite has happened. Economically the euro turned out to be very good for Germany, and with the euro crisis Chancellor Angela Merkel became the informal Queen of Europe. The new grammar of power reflects the difference between creditor and debtor countries: it is not a military but an economic logic. Its ideological foundation is ‘German euro nationalism’ - that is, an extended European version of the Deutschmark nationalism that underpinned German identity after the Second World War. In this way the German model of stability is being surreptitiously elevated into the guiding idea for Europe. The Europe we have now will not be able to survive in the risk-laden storms of the globalized world. The EU has to be more than a grim marriage sustained by the fear of the chaos that would be caused by its breakdown. It has to be built on something more positive: a vision of rebuilding Europe bottom-up, creating a Europe of the citizen. There is no better way to reinvigorate Europe than through the coming together of ordinary Europeans acting on their own behalf.

The eighth volume in the annual series sponsored by BRVA as part of its OpenMind initiative devoted to disseminating knowledge on key issues of our time, The Search for Europe analyses the present and future of the old continent and its integration project, which is certainly the most ambitious political and economic integration project ever attempted in history, and a benchmark for similar processes in other regions.

This book offers a strikingly new perspective on EU enlargement. Basing his findings on substantial empirical evidence, Zielonka presents a carefully argued account of the kind of political entity the European Union is becoming, with particular reference to recent enlargement.

For many observers, the European Union is mired in a deep crisis. Between sluggish growth; political turmoil following a decade of austerity politics; Brexit; and the rise of Asian influence, the EU is seen as a declining power on the world stage. Columbia Law professor Anu Bradford argues the opposite in her important new book The Brussels Effect: the EU remains an influential superpower that shapes the world in its image. By promulgating regulations that shape the international business environment, elevating standards worldwide, and leading to a notable Europeanization of many important aspects of global commerce, the EU has managed to shape policy in areas such as data privacy, consumer health and safety, environmental protection, antitrust, and online hate speech. And in contrast to how superpowers wield their global influence, the Brussels Effect - a phrase first coined by Bradford in 2012- absolves the EU from playing a direct role in imposing standards, as market forces alone are often sufficient as multinational companies voluntarily extend the EU rule to govern their global operations. The Brussels Effect shows how the EU has acquired such power, why multinational companies use EU standards as global standards, and why the EU’s role as the world’s regulator is likely to outlive its gradual economic decline, extending the EU’s influence long into the future.

This two-volume project provides a multi-sectoral perspective over the EU’s external projections from traditional as well as critical theoretical and institutional perspectives, and is supported by numerous case studies covering the whole extent of the EU’s external relations. The aim is to strive to present new approaches as well as detailed background studies in analyzing the EU as a global actor. Volume 1: The first volume “Theoretical and Institutional Approaches to the EU’s External Relations” addresses the EU’s overall external post-Lisbon Treaty presence both globally and regionally (e.g. in its “neighborhood”), with a special emphasis on the EU’s institutional framework. It also offers fresh and innovative theoretical approaches to understanding the EU’s international position. - With a preface by Alvaro de Vasoncelos (former Director European Union Institute for Security Studies) Volume 2: The second volume “Policies, Actions and Influence of the EU’s External Relations”, examines in both quantitative and qualitative contributions the EU’s international efficacy from a political, economic and social perspective based on a plethora of its engagements.

Europe’s center-left is rapidly falling out of love with the European single currency. Fifteen years after its creation, British journalists Larry Elliott and Dan Atkinson assess its performance to show why. Looking at a range of key indicators the authors show how the euro has failed to deliver on its promise of more jobs, more growth and greater equality. Instead it has undermined the European Union. Elliott and Atkinson compare the European Central Bank to the Federal Reserve, arguing that the architects of the euro subjugated economic measures to political considerations. Consequently, countries that didn’t meet the economic convergence criteria were still allowed entry. The end result is a dysfunctional currency union that is unable to cope with difficult economic circumstances. Assessing the situations in Greece, Germany, Italy, France, Ireland, and Iceland, as well as Britain, they show that the current policy of kicking the can down the road and hoping that something will turn up is proving increasingly unpopular with the currency’s one-time fans in progressive politics. This engaging and accessibly written volume will be widely read by economists, pundits, and policymakers as Britain considers its future relationship with Europe.

Problems posed by Syria’s chemical weapons attacks, Egypt’s ouster of an elected government, and myriad other global dilemmas beg the question of whether and how the world can be governed. The challenge is addressing what former UN Secretary-General Kofi Annan called Problems without Passports environmental, economic, humanitarian, and political crises that threaten stability, prosperity, and even human survival. Everything is globalized everything “except” politics, which remain imprisoned behind national borders. The world has changed, but our basic way of managing it has not. We pursue fitful, tactical, short-term, and local responses for actual or looming threats that require sustained, strategic, longer-run, and global actions. With clarity and passion, Thomas G. Weiss argues for a diversity of organizational arrangements some centralized, some decentralized and a plurality of problem-solving strategies some worldwide, some local. He proposes a three-pronged strategy: the expansion of the formidable amount of practical global governance that already exists, the harnessing of political and economic possibilities opened by the communications revolution, and the recommitment by states to a fundamental revamping of the United Nations.”
