JIGS AND FIXTURES Non-standard Clamping Devices

jigs and fixtures are the devices which help in increasing the rate of identical parts and reducing the human efforts required for producing these parts, It has already been emphasized earlier that a center lathe is a suitable machine tool for producing individual parts of different shapes and sizes, but for producing similar articles in great number its use will not be economical.

Jigs and Fixtures: Types, Parts, Definition, Applications

...

Jigs vs Fixtures: Both the jigs and the fixtures are used to reduce the nonproductive time of any mass production process. The principle of location or the 3-2-1 principle, CAD tools (like ProE), and FEA tools (like ANSYS) are used for the design of the jigs as well as the fixtures.

JIGS AND FIXTURES: Non-standard Clamping Devices: Grant ...

The most common type of jig is the drill jig, which guides the drill bit for creating holes at desired locations. Using of drill jigs increases production rate drastically by eliminating the time spent using a square scribe, height gauge, center punch, etc. The fixture is the tool which holds the work piece with the machine bed precisely at the desired location.

Jigs and Fixtures - Applications and Difference Between ...

Jigs and Fixtures are production tools used to accurately manufacturing duplicate and interchangeable parts. They are specially designed so that a large number of components can be machined or assembled identically, and to ensure interchangeability of components. They eliminate the necessity of a special

Make Jigs and Fixtures by 3D Printing. Traditionally,
only a few jigs and fixtures are needed for a production
line and different production lines require different
fixtures. As a non-standard product for small scale
production, jigs and fixtures require a lot of effort to
make traditionally.

How to 3D Print Tooling, Jigs and Fixtures
