sustainable, recyclable and eco-friendly methods for materials. Chapters are written by eminent scholars and leading experts from around the globe who discuss the properties and applications of carbon-based materials, such as nanotubes (buckytubes), fullerenes, cones, horns, rods, foams, nanodiamonds and carbon black, and much more. Chapters provide cutting-edge, up-to-date research findings on the use of carbon-based materials in different application fields and illustrate how to achieve significant enhancements in physical, chemical, mechanical and thermal properties. Demonstrates systematic approaches and investigations from design, synthesis, characterization and applications of nanocarbon based composites Aims to compile information on the various aspects of synthesis, properties and applications of nano-carbon based materials Presents a useful reference and technical guide for university academics and postgraduate students (Masters and Ph.D.)

instruments are available with modern data processing techniques. This book covers the elementary and basic aspects of atomic spectroscopy like Bohr's theory and atomic physics up to the latest developments including laser cooling, Bose-Einstein condensates and atom lasers. Spectroscopy plays a major role in every field of science and this book would be valuable for physicists, chemists and biologists.

This book entitled Electricity & Magnetism covers the syllabi of B.Sc.(Pass & Honours) and Engineering students of various Universities in India, and is written purely in S.I. Units (rationalised MKS system of units) with a complete vector treatment. The mathematical description of the book is based on the methods of vector analysis. Vector analysis provides an efficient short-hand for writing physics and the same time makes it possible to visualise the physical meaning of concepts and laws distinctly and exactly. Hence, the vector treatment becomes necessary.
