The Diary of a Young Girl, also known as The Diary of Anne Frank, is a book of the writings from the Dutch language diary kept by Anne Frank while in 1942, with zis occupying Holland, a thirteen-year-old Jewish girl and her family fled their home in Amsterdam and went into hiding The family was apprehended in 1944, and Anne Frank died of typhus in the Bergen-Belsen concentration camp in 1945. In her diary Anne Frank recorded vivid impressions of her experiences during this period. By turns thoughtful, moving, and amusing, her account offers a fascinating commentary on human courage and frailty and a compelling self-portrait of a sensitive and spirited young woman whose promise was tragically cut short. The diary was retrieved by Miep Gies, who gave it to Anne's father, Otto Frank, the family's only known survivor, just after the war was over. The diary has since been published in more than 60 languages.

"Hell hath no fury like a mathematician whose child has been scorned by an education system that refuses to know better," Barry Garelick wrote in his first published article on math education in 2005. He has been at it ever since, and his focus has remained the same: why many of today's practices for teaching math are ineffective and often destructive. This collection brings together some of his best articles on math education over the past ten years. Garelick states: "In writing these articles, I often feel that I am explaining in detail why jumping out of an airplane without a parachute will result in death. And while I am heartened that my readers have found these articles useful, I am also disheartened when I hear the education establishment react with arguments that are tantamount to 'Oh but if you jump out of an airplane the right way, you can survive.'" Nevertheless there is a growing momentum in the U.S. against the well-intentioned but highly injurious nonsense that passes for math education. This collection of articles will assure those people who are convinced that it is being taught poorly that they are right. Reviews: "Barry Garelick is an invaluable source of clear-eyed analysis in a world of math education that is so often given over to fads, agendas, and assorted foolishness. Garelick approaches math instruction, curriculum, and reform with a studios expertise and a wry skepticism that is all too rare. His book will be a welcome resonce for parents and teachers frostrated with math education and seeking hard-headed advice on what ought to be done differently." Frederick Hess, Director of Education Policy Studies at American Enterprise Institute "A teacher, a parent and a mathematics major, Garelick's first-hand accounts of his experiences navigating the world of math education are all too familiar to those of us who have experienced the negative impact of educational fads in mathematics classrooms. This book is a must read for parents, teachers and anyone who cares about the way math is taught in North American schools." Dr. Anna Stokke, associate professor of mathematics at the University of Winnipeg. "Barry Garelick's highly readable volume of essays uses a diverse set of critical lenses to trace the stories of—and convincingly impugn—math-instructional ideals and methods that have not yet come close to fulfilling their proponents' promises. Required reading for anyone growing weary of all the lagging results, faddish terminology, and upside-down approaches they see across American K-12 mathematics instruction." Eric Kalenze, author of "Education is Upside-Down" "Those who criticize traditional methods of teaching math are prone to spout wise-sounding homilies about the need to "teach children to think like mathematicians. Barry Garelick understands that if you want kids to think like a mathematician you need to teach them some math, not wait for them to discover basic procedures on their own. For those stubbornly committed to learning math through discovery, here's hoping they discover Garelick's book." Robert Pondiscio, Senior Fellow and Vice President for External Affairs, Thomas B. Fordham Institute

Engage students in mathematics using growth mindset techniques The most challenging parts of teaching mathematics are engaging students and helping them understand the connections between mathematics concepts. In this volume, you'll find a collection of low floor, high ceiling tasks that will help you do just that, by looking at the big ideas at the kindergarten-grade level through visualization, play, and investigation. During their work with tens of thousands of teachers, authors Jo Boaler, Jen Munson, and Cathy Williams heard the same message—that they want to incorporate more brain science into their math instruction, but they need guidance in the techniques that work best to get across the concepts they needed to teach. So the authors designed Mindset Mathematics around the principle of active student engagement, with tasks that reflect the latest brain science on learning. Open, creative, and visual math tasks have been shown to improve student test scores, and more importantly change their relationship with mathematics and start believing in their own potential. The tasks in Mindset Mathematics reflect the lessons from brain science that: There is no such thing as a math person - anyone can learn mathematics to high levels. Mistakes, struggle and challenge are the most important times for brain growth. Speed is unimportant in mathematics. Mathematics is a visual and beautiful subject, and our brains want to think visually about mathematics. With engaging questions, open-ended tasks, and four-color visuals that will help kids get excited about mathematics, Mindset Mathematics is organized around nine big ideas which emphasize the connections within the Common Core State Standards (CCSS) and can be used with any current curriculum.

A smart, romantic comedy about how finding The One doesn't always have to be love at first sight... Lavinia Ferrari is in her fifth year at Bocconi University where she studies Economics when she is introduced to a new project that will guarantee her extra credits. She's intrigued... but it means the class must team up with students from the Computer Engineering course. Lavinia has absolutely no interest in the project, and to top things off, she's paired with Seb Marconi who is less than enthusiastic. When the work begins, her friends seem to be making great progress with their partners, but Lavinia isn't having the same luck... Seb is making it quite clear that he's not interested in the project, or Lavinia, fuelling her frustration. She has no choice – they're stuck in this, and besides, she won't receive her extra credits unless they work together. Lavinia must come up with a way to convince the guy who drives her crazy to put the work in... but how? From the author of LOVE TO HATE YOU, YOU DRIVE ME CRAZY and UNTIL LOVE DO US PART.
