This workbook has been created specifically for primary schools teaching a UK based curriculum. Written with an international focus, it is designed for primary pupils from a range of backgrounds to prepare them for studying science at secondary level.

Nelson English International is a structured English course, which has been specifically developed to meet the requirements of overseas students.

Make economics resonate to high school students. This practical handbook will help economics and social studies teachers foster critical thinking by introducing students to the real-life dimensions of the major controversies in contemporary economics. Filled with useful teaching tips and user-friendly information on finding engaging materials and activities for the classroom, the book also includes detailed coverage of the Voluntary National Content Standards for economics. "Introducing Economics" is a one-stop resource for high school teachers who want to make economics relevant to their students' lives. It includes more than 50 sections with lists of suggested "Activities and Resources," many with Internet links. It features boxed "Hints for Clear Teaching" tips for presenting particularly difficult topics. It provides an annotated resource guide to more than 30 organizations involved in economics education, with associated Internet links. It follows the flow of topics in a typical economics course. It addresses real-life topics that are ignored or glossed-over in traditional textbooks - economics and the environment, the distribution of income and wealth, discrimination, labor unions, globalization, the power of corporations, and more. It offers critical guidance for meeting all 20 Voluntary National Content Standards in economics, and also provides an overview of the political and intellectual history and contemporary state of economics education.

The International Guide to Student Achievement brings together and critically examines the major influences shaping student achievement today. There are many, often competing, claims about how to enhance student achievement, raising the questions of "What works?" and "What works best?" World-renowned bestselling authors, John Hattie and Eric M. Anderman have invited an international group of scholars to write brief, empirically-supported articles that examine predictors of academic achievement across a variety of topics and domains. Rather than telling people what to do in their schools and classrooms, this guide simply provides the first-ever compendium of research that summarizes what is known about the major influences shaping students’ academic achievement around the world. Readers can apply this knowledge base to their own school and classroom settings. The 150+ entries serve as intellectual building blocks to creatively mix into new or existing educational arrangements and aim for quick, easy reference. Chapter authors follow a common format that allows readers to more seamlessly compare and contrast information across entries, guiding readers to apply this knowledge to their own classrooms, their curriculums and teaching strategies, and their teacher training programs.

How do snow crystals form? What shapes can they take? Are no two snow crystals alike? These questions and more are answered in this visually stunning exploration of the science of snow. Perfect for reading on winter days, the book features photos of real snow crystals in their beautiful diversity. Snowflake-catching instructions are also included.
