Analyzes the characteristics of obsessive-compulsive, paranoid, hysterical, and compulsive neuroses in the light of recent theoretical and clinical studies

This masterful new book presents for the first time an approach to psychotherapy based on Shapiro's classic Neurotic Styles. A series of eloquent chapters, illustrated with clinical vignettes, bring to bear his brilliant ideas about character development on the actual conduct of psychotherapy. "This long awaited volume richly fulfills its promise. Few writers on the psychotherapy scene have as interesting, or as important, things to say. This beautifully written book is fresh, insightful, and wise".--Paul Wachtel, Ph.D. Index.

Dr. David Shapiro's first new book in ten years, Dynamics of Character deepens his now-classic studies of psychopathology with this conceptualization of a dynamics of the whole character--a self-regulatory system that encompasses personal attitudes, modes of activity, and relationship with the external world. Extending and magnifying Shapiro's original vision of psychopathology, Dynamics of Character is a resonantly reasoned response to the reduction of complex processes of mind to products of biological defect of psychological trauma.

Shapiro's keenness of observation and profound clinical wisdom are once again in evidence, as he brings to bear his brilliant ideas about neurotic character on the actual conduct of psychotherapy. The therapeutic material, argues Shapiro, consists not merely of what the patient provides but of the patient. Pay attention not only to the words, Shapiro says, but also to the speaker. Shapiro's highly original view of the dynamics of neurosis emphasizes subjective experience and revises classical conflict theory. The therapist's goal is to introduce the patient to himself and thus to end the self-estrangement that characterizes neurosis. In a series of eloquent chapters, richly illustrated with clinical vignettes, he elaborates this view, exploring such topics as the process of change, the psychology of “ raising consciousness, ” and the therapeutic relationship. No therapist, regardless of persuasion, will fail to be enlightened and inspired by this essential contribution to the field.

This new book by David Shapiro, author of the classic Neurotic Styles, throws light, from a clinical standpoint, on a subject of importance, both theoretically and for therapeutic practice, for psychoanalysts and psychotherapists, as well as for those with general interests in philosophy or psychology. A Psychodynamic View of Action and Responsibility explores the individual ' s experience of ownership or responsibility for what he or she does, says, and even believes, and their avoidance of that experience. David Shapiro considers the self-

deception necessary for these disclaimers of responsibility and the surrender of personal conviction and autonomous judgment. With numerous excerpts from therapeutic sessions, he shows these to be self-protective reactions forestalling or dispelling the anxiety of internal conflict and also, as in false confessions, external threat or intimidation. Shapiro presents this important thesis in his usual lucid way and in many contexts. Its recognition, in his view, is critical for therapeutic work. This book demonstrates the central place in psychological dynamics of the subjective sense of personal responsibility or ownership of what one says or does. The subject is nowhere treated with the depth and emphasis on subjective experience seen in these chapters. A Psychodynamic View of Action and Responsibility will appeal to professionals and students of psychoanalysis and psychodynamic psychotherapy, as well as clinical psychologists, CBT practitioners, philosophers, and legal scholars.

With his penetrating theory of personality and his nuanced understanding of the psychotherapeutic relationship, David Shapiro has influenced clinicians across the theoretical spectrum since the publication of *Neurotic Styles* in 1965. This influence is on vivid display in *Personality and Psychopathology*, as noted contemporary theorists critically evaluate his work in a fascinating dialogue with Shapiro himself. Starting with a crucial therapeutic observation—the centrality of the relationship between what the client says in session and how it is said—contributors revisit his core concepts regarding personality development, the prevolitional aspects of psychopathology, the limits to self-understanding, and the defensive uses of self-deception in light of current psychodynamic, evolutionary, and systems theory. Shapiro's replies, and the contributors' rejoinders, highlight points of departure and agreement and provide further clarification and extension of his ideas on a wide range of salient topics, including: The experience of autonomy in schizophrenia. Defensive thinking to prevent dreaded states of mind. The linguistics of self-deceptive speech. Self-deception as a reproductive strategy. Intentionality and craving in addiction. The subjective experience of hypomania. *Personality and Psychopathology* affords psychotherapists and research psychologists not only a unique opportunity to gain insight into Shapiro's contributions, but also new lenses for re-examining their own work.

Beginning with a discussion of the problem of autonomy in dynamic psychiatry and a review of its development from infancy to adolescence, the author of *Neurotic Styles* explores, with numerous clinical examples, the distortion of the development of autonomy in obsessive-compulsive conditions, in sadism and masochism, and, finally, in paranoia.

When his Tumblr blog catches the attention of *The New York Times* as well as the White House, David, a recent NYU grad, discovers that his newfound fame doesn't quell his confusion about the world and his place in it. 10,000 first printing.
