The Nikon Micro-NIKKOR 105mm f/4 has excellent optics and mechanics. It is at least 90% as good as today's newest 105mm lenses wide-open, and at least as good stopped down. Unlike the newest lenses, it is manual-focus only, which is ideal for macro work. "Micro" is Nikon's word for Macro.

Nikon 105mm f/4 Micro-NIKKOR (1970-1983)

Better than Canon's 180mm macro, this Micro-NIKKOR's automatically compensating diaphragm ensures that manual exposures match at different focus distances, important in studio macro work with strobes. If you want the sharpest possible 200mm lens, this is it, even if you don't need the macro ability.

For Nikon, a used manual-focus TC-200 for about \$50 and any 105mm macro could be all you need. Here are the best macro lenses for both general and macro photography. All of these are at least as sharp, and usually sharper than regular lenses, even at infinity.

Best Macro Lenses - Ken Rockwell Review

It is the same glass as the manual focus 28-85/3.5-4.5 Ai-s, but the macro operation is a little different. There are two AF versions. The original AF version (1986-1990) had a nasty thin hard plastic focus ring. The one I have and review here, the AF-n (1990-1999), has a wider rubberized focus ring.

Nikon 28-85mm f/3.5-4.5 AF Nikkor test Review © 2004 ...

Nikon uses the word "Micro" to mean the same thing as "macro." I'll use these words interchangeably. The Nikon Micro-NIKKOR 55mm f/3.5 is an excellent manual-focus lens. It works perfectly on every manual-focus Nikon camera, and also works great on all better digital Nikons, especially the D3X, D700 and other FX cameras.

Nikon 55mm f/3.5 Review

The key feature of this Micro-NIKKOR lens is a short minimum focus distance - only 0.163 m. By turning on the AF, you can get really close to a live subject without scaring it off due to the Silent Wave Motor that hunts quickly and quietly. With the 1:1 reproduction ratio, you can get nice clear macro photos.

This is an FX lens, and works especially well with on FX, 35mm and DX Nikons like the D4, D800, D800E, D7000, D700, D3X, D300s and F6. It works fantastically on manual-focus cameras like the F2As, F3, FE and FA, since it has real manual-focus and aperture rings that work exactly as they should.

You own a Nikon DSLR, but which Nikon (Nikkor) lens is best for your shooting style and your budget? This guide by pro photographer Jerod Foster will help you learn the features of Nikon lenses to capture the stunning pictures you want for a price that matches your needs. Foster starts with the basics of using lenses in the Nikon lineup-from kit, to prime, to wide angle, to telephoto, to zoom, and more. Whether it's portraits, landscapes, sports, travel, or night photography, you will have a better understanding of the different Nikon lenses and your choices for investing in them. In this guide you will: Master the key camera features that relate to lenses-depth of field, perspective, and vibration reduction Learn the difference between full frame versus cropped sensors and how they affect specific lenses Understand best practices for maintaining your lenses and for taking better pictures Accessorize your Nikon lenses with lens rigs, extenders, and other add-on equipment Minimize lens flaws such as distortion and chromatic aberration in post processing with Lightroom Grasp all the concepts and techniques as you go, with assignments at the end of every chapter Beautifully illustrated with large, compelling photos, this book for beginning-to-intermediate digital photographers will help you get the image you want every time you pick up your camera. And once you have the shot, show it off and join the book's flickr group: www.flickr.com/groups/nikonlenses_fromsnapshotstogreatshots.
