Statistics about organ donation - NHS Organ Donation

Organ transplantation is a medical procedure in which an organ is removed from one body and placed in the body of a recipient, to replace a damaged or missing organ. The donor and recipient may be at the same location, or organs may be transported from a donor site to another location. Organs and/or tissues that are transplanted within the same person's body are called autografts.

National Organ Transplant Act: Hearing Before the ...

New developments in immunosuppression (the use of drugs to prevent organ rejection) advanced the field of transplantation enormously. Kidney transplantation became a routine procedure, supplemented by dialysis with an artificial kidney (invented by Willem Kolff in wartime Holland) before and after the operation, and mortality was reduced to about 10 percent per year by the 21st century.

History of medicine - Organ transplantation | Britannica

There are a ton of things that happen behind the scenes before you even hear from your transplant center. Here's a summarized list of what might be happening: When a patient has been declared brain dead or is nearing death, the hospital notifies their local OPO who determines whether that person has the potential to be a donor and if so, they will head to the hospital
