To run a Python program from the command line, just type the name of the Python executable (python.exe on Windows, python on OS X and Linux) followed by the name of the Python file you've created. If any of the above doesn't work or seems complicated, just use the graphical editor as described in the next section. Using a graphical

Read Book Python Programming For Biology By editor Tim J Stevens

Introduction – Python for Biologists

I chose to use Python for these courses for a handful of reasons including: It is the language with the greatest potential to be used across the breadth of biology. It is increasingly utilized by folks spanning from traditional bioinformatics to climate modelers.

Why Python? • Programming for Biologists

Offered by University of California San Diego. Are you interested in learning how to program (in Python)
